GEORGE NJAU WANJIKU
DATA ANALYST

njaugeorge42@gmail.com | +254708795295 | www.linkedin.com/in/jvtech254 | https://github.com/JV-254 | https://datascienceportfol.io/jvdatatechsolutions | Nairobi-Kenya

SUMMARY

Data Analyst with hands-on experience using SQL, Excel and Power BI to clean, analyze and visualize data. Experienced in exploratory data analysis, dashboard development, data modelling, and presenting data-driven insights to stakeholders. Skilled in Python for data analysis and committed to using data to support better business decisions.

SKILLS

Technical Skills: SQL (MySQL, SQL Server) | RDBMS | Power BI | Python | Microsoft Excel | Data Cleaning | Data Visualization | Data Manipulation | Data Modelling | DAX | Power Query | Descriptive Statistics | Correlation Analysis |GitHub Basics

EDUCATION

KIAMBU NATIONAL POLYTECHNIC **September. 2024 – Expected completion March 2027**

Diploma in Computer Science

WORK EXPERIENCE

Analyst Lab Africa

Data Analyst Intern **May 2026-July 2026**

- Conducted exploratory data analysis (EDA) on large datasets to identify trends and insights using MySQL.
- Developed and supported interactive Power BI dashboards and Excel reports to monitor Profit metrics, Quantity metrics, enabling stakeholders to track Profit Margin.
- Presented analytical findings to stakeholders, providing recommendations based on data-driven insights.

PROJECTS

E-Commerce Sales Analysis | Power BI

- **Project Overview**

  This project is an end-to-end Business intelligence solution built using Power BI to analyze e-commerce sales performance, customer behavior, product trends and profitability.

  The objective of the project is to transform raw transactional data into meaningful business insights through data cleaning, modeling, DAX calculations, and interactive dashboard visualizations. For more on the project visit my GitHub: https://github.com/JV-254/E-COMMERCE-_SALES-ANALYSIS-USING-POWER-BI-PROJECT

Student Performance Analysis | Python

- Overview

  The Student Performance Dashboard is a data analysis project built using **Python**, **NumPy**, **Pandas**, and **Matplotlib**. The project analyzes students' academic performance by calculating key performance metrics, generating insights, and visualizing the results through charts.

E- Commerce Sales Analysis | SQL

- Overview

  This project focuses on analyzing an e-commerce sales dataset using MySQL to uncover valuable business insights related to sales performance, customer behavior, product trends, profitability, and operational efficiency.
